Year's top story was that killed 241 in Beirut

NEW YORK (AP) - The killing of 241 U.S. servicemen in a truck bombing at the Beirut airport in Lebanon was the top news story of 1983, according to a vote by Associated Press members.

The No. 2 story in the poll of newspaper, radio and television news editors was the downing of a South Korean airliner by Soviet

The U.S. economy, which was the top story in the 1982 poll, ranked fourth this year as inflation abated and unemployment

The top 10 news stories of 1983 in order:

- 1. Beirut airport massacre.
- 2. Downing of South Korean airliner.
- 3. U.S. invasion of Grenada.
- 4. U.S. economy improves, deficit rises.
- 5. Missiles deployed in Europe, Soviets end talks.
- 6. Antinuclear movement in Europe, nuclear freeze drive in the United States.
- 7. Polish Solidarity leader Lech Walesa wins Nobel Peace prize.
- 8. Menachem Begin resigns as Israeli prime minister.
- 9. Winter storms, spring flooding, drought and hurricanes plague the nation.

10. Interior Secretary James G. Watt

howing of the film "The Day After" a nulear attack, the split in the Palestine Libera-Martin Luther King Jr., the assassination of Philippine political leader Benigno Aquino, the disappearance from public view of Soviet President Yuri Andropov, and the Australian sailing victory in the America's Cup.

Votes were tabulated by awarding 10 points for a first choice down to one point for a 10th choice.

Details of the top story:

It was about 6:20 on a peaceful Sunday morning in October. Members of the U.S. peacekeeping force were sleeping in a Marine barracks at Beirut International Airport when a truck driven by a suicide driver roared past startled guards.

In seconds it blew up with the force of a ton of TNT, collapsing the building. When the body count was over, 241 U.S. servicemen

The massacre intensified questions about the U.S. presence in Lebanon, and whether a peacekeeping force could provide stability for the faltering Lebanese government while it tried to work out compromises between the country's many factions.

President Reagan insisted that U.S. forces would remain until the job was done

Runner-up stories included the television ion Organization, the march commemorating

"Global reach" revisited

A recent article in the *Economist* (July 23, 1983) suggests that "dependency" theorists must contend with a new phenomenon: The emergence of multinational corporations based in the Third World.

Multinational companies used to be seen as the bogymen of the third world, exploiting cheap labor in the poorer countries and bullying dependent governments. But increasingly the more dynamic countries of the third world are growing their own multinationals. The motives for these companies expanding out of their home markets are the same as those that have driven western multinationals: the search for greater sales inside import barriers; the need to escape from stagnant sales at home; a yearning for cheaper centres of production from which to service their regional market. Two new studies measure the trend. South-east Asia... provides an example of several burgeoning companies.

Hyundai, the South Korean shipbuilding and industrial concern with sales last year of \$7.6 billion, has grown bigger than France's Michelin and Britain's Rio Tinto-Zinc. In a list of the top 500 non-American industrial companies, Taiwan's Walsin Lihwa, an electrical and electronics group, outranks Distillers of Britain, Atlas Copco of Sweden and DeBeers of South Africa, with its last year's sales of \$3.7 billion. Four state oil companies from Kuwait, Mexico, Brazil and Venezuela all figure in the top 11. Such newcomers are not just big, they are becoming multinational with their factories and holdings abroad.

Up to 50 third-world countries have companies with direct overseas investments, according to a study to be published later this year by the Paris-based, Nestle-financed Institute for Research and Information on Multinationals (IRM). Professor Louis T. Wells, a multinational watcher at the Harvard Business School, has put the number of foreign manufacturing and trading subsidiaries of third-world companies from 15 countries at 1,300....

The emergence of multinationals from the newly-industrialising countries spells changes for the giants of international business. They will face competition in some markets, as well as opportunities for co-operation in joint ventures. The development could help smooth relations between poorer countries and multi-national business....

Most of the third-world companies' investments are in other developing countries. The companies reflect the aspirations of their countries of origin. They aim to progress from processing their own resources and substituting for imports at home. Often their first foreign expansion is among their own ethnic-minority markets abroad. They compete there with western multinationals, using the advantages of local knowledge, and often succeed in finding lower labour and production costs. They also hope to gain access abroad to foreign technology that is not always available in their home countries. For example, India firms abroad get access to international technology deliberately kept out of the home country.

A recent United Nations study of 23 third-world multinationals found they were less capital-intensive than developed-country multinationals; their output was more suited to third-world consumers; they used more locally-made materials and they competed more on price rather than on brand names, advertising and other rich-nation concepts not always appropriate to the third world. The third-world multinationals were also judged more likely to enter joint ventures locally because they had less to protect (in products and

technology)....

But third-world multinationals are still a long way from matching American or European multinationals for technical innovation. Which is a big reason why third-world multinationals are so keen on joint ventures with western ones.

Om

The following press release was recently distributed by the Age of Enlightenment News Service (United States) for the Maharishi International University:

For Immediate Release [July 7, 1983]

During the past year, a team of scientists at the central campus of Maharishi International University in Fairfield, Iowa, led by Dr. David Orme-Johnson, have carefully analyzed the correlation between the number of individuals participating in the group practice of the Transcendental Meditation and TM-Sidhi program at MIU—the Super-radiance program—and changes in the U.S. stock market, U.S. treasury bonds and bills, and the value of the U.S. dollar against foreign currencies.

The scientists have found that since March, 1982, eighty percent of the stable growth in the stock market occurred during or immediately following high numbers in the Super-radiance program at

MIU....

Dr. Orme-Johnson pointed out that upturns in the stock market have preceded recoveries during each of the eight recessions of the past four decades, leading the recovery by five months on the average. The market began its current rise in August, 1982, and by

January, 1983, improvements in major economic indices, including unemployment, signalled an end to the recession. Peak levels of participation in the group dynamics of consciousness at MIU have

consistently led significant rises in the stock market....

The MIU research team has also found significant correlations between the value of U.S. Treasury bonds and bills and the value of the U.S. dollar and the number of participants in the TM and TM-Sidhi program, or Sidhas, at MIU. Whenever the numbers at MIU have been high, the dollar has been up, the value of bonds and bills has been up, and the stock market has been up. The scientists are calling these "All-America Days."

The founder of the Maharishi Technology of the Unified Field, Maharishi Mahesh Yogi, explains that this effect of raising coherence in world consciousness and creating integrated national consciousness in every country is the spontaneous result of a technology which automatically brings the life of the individual and society into alliance

with all the laws of nature.

Maharishi explains that the basic cause of problems is violation of the laws of nature by the whole population. Everyone in every nation has been violating the laws of nature and creating stress in individual and collective consciousness. The accumulation of stress must result in turbulence and negative trends in society and problems and suffering everywhere.

Until a quarter of a century ago, the four forces—electromagnetism, the weak interaction, the strong interaction, and gravitation—were understood to be the fundamental forces of nature. However, with increased purity and creativity in world consciousness resulting from the world-wide practice of Transcendental Meditation over these past twenty-five years, gradually all these four forces have been found to have their common source in the unified field—the self-referral, self-sufficient infinite potential of all the laws of nature.

Through Transcendental Meditation the conscious mind experiences and identifies itself with the unified field in the state of pure consciousness, transcendental consciousness. In this way all thoughts and actions of the individual begin to be spontaneously in accord with natural law. Through this technology of consciousness the individual gains the support of nature for all success in life. He ceases to make mistakes and stops creating problems and suffering for himself and others.

A small proportion of the population practicing the Maharishi Technology of the Unified Field is sufficient to enliven the unified field of natural law in the whole of national consciousness, bringing the support of the infinite organizing power of nature to all of national life. This results in increased creativity and productivity, growing national self-sufficiency and self-reliance, and integrated national consciousness. The people enjoy increasingly perfect health, greater cultural integrity, and more problem-free society, and the government begins to enjoy problem-free administration.

Announcing an

ESSAY COMPETITION

First Prize \$1000 and Publication in

THE Public Interest

ELIGIBILITY

The competition is open to full-time or parttime graduate students in the fields of education, law, business, the social sciences, public policy, and public administration.

Entrants must not yet have reached their 28th birthday and must not have previously published in THE PUBLIC INTEREST. Two or more students may collaborate on a single entry. If it should be the winning essay, the co-authors will share the \$1,000 prize.

SUBJECT MATTER

The essay may deal with any domestic policy issue, whether national or local. Choice of specific subjects is unrestricted: economic growth, welfare, education, the judiciary, regulation, trade, military planning, immigration, crime, scientific research, support for the arts and humanities—these are only examples of policy areas that could be discussed.

DEADLINES

All entries must be postmarked no later than January 13, 1984. The winning entry will be announced no later than March 30, 1984. Publication of the prize essay will take place in a forthcoming 1984 issue of THE PUBLIC INTEREST.

FORMAT

Submissions must be typewritten, double-spaced on only one side of each page. Pages must be numbered. There is no minimum length for submissions, but they may not exceed 7,500 words.

Every entry must have a detachable title page showing the author's name, address, telephone number, and educational affiliation. A self-addressed, stamped (20¢) envelope must be included. If you want your manuscript returned, you must also include a self-addressed envelope large enough to hold the manuscript, with sufficient postage already affixed.

Handling of references in the essay must be consistent with the University of Chicago Manual of Style.

Send entries to:
